

Application

SERIES BD-DOME LOADED REGULATING VALVES AS CONTROL VALVES

Flow control, level control or temperature control can be accomplished using dome loaded regulators quite easily. Integration with a computer system is very simple. Using a pilot provides a high degree of accuracy. The dome loaded regulator is:

- Faster in response than control valve
- More compact
- Environmentally safe
- Capable of higher turndown ratio
- More cost effective
- No negative emissions
